## Associated Forms Available Online

- Appendix A: Western Washington Water Type Classification Worksheet
- Appendix B: Type S and F Riparian Management Zone Cross Section
- Appendix C: Inner Zone Hardwoods Conversion Worksheet
- Appendix D: Slope Stability Informational Form
- Appendix E: CMZ Assessment Form
- Appendix F: Stream Shade Assessment Worksheet
- Appendix G: Western Washington Type Np RMZ Worksheet
- Appendix H: Natural Regeneration Plan, Western Washington
- Appendix I: Watershed Analysis Worksheet
- Appendix J: Marbled Murrelet Form

## Summary of Changes in 2018

Caution: The ordering of questions on the Forest Practices Application/Notification (FPA/N) has changed. Please pay special attention. In addition, the following changes were made to the FPA/N:
- Sub-questions were added to the question regarding landownership:
  - Are your proposed forest practices activities within an area covered by an approved Forest Stewardship Plan or Forest Management Plan developed in cooperation with DNR?
  - Did you receive technical assistance from a DNR small forest landowner Stewardship and Technical Assistance Forester for this FPA/N?
  - Have you participated in a Washington State University Extension Service and/or DNR-sponsored Coached Planning course?
  - Have you attended a Washington State University Extension Service and/or DNR-sponsored Family Forest Owner Field Day?
- Language regarding mitigation measures from a geotech report was added to ‘Additional Information’.
- The questions regarding unstable slopes were combined.
- The question, “When are you planning to begin work on the proposed activity?” was removed.
- The check box for “I currently own more than 80 acres of forestland in Washington.” was removed.
General Information

Performing the following activities on forest land (refer to WAC 222-16-010 for definition of ‘forest land’) may require a Forest Practices Application/Notification (FPA/N):

- Harvesting timber;
- Salvaging logs, stumps, or snags;
- Constructing forest roads;
- Installing or replacing culverts/bridges on forest roads, or conducting any work in or over typed water;
- Large woody debris placement/removal in any typed water associated with a Forest Practices activity;
- Constructing or expanding gravel pits on forest land for forestry use; and/or
- Using aircraft to apply chemicals.

Forest practices activities deemed a Class IV-Special (Class IV-S) or Class IV-General (Class IV-G) will require a State Environmental Policy Act (SEPA) Environmental Checklist be completed and submitted with the FPA/N. Descriptions of Class IV-S and Class IV-G activities can be found in WAC 222-16-050. SEPA Environmental Checklists can be obtained here: https://ecology.wa.gov/regulations-permits/SEPA-environmental-review.

Please contact the Department of Natural Resources (DNR) Region office to see if an FPA/N is required.

### DNR Eastern Washington Region Offices

**Southeast Region**
713 E. Bowers Road  
Ellensburg, WA 98926  
Tel: (509) 925-8510  
Fax: (509) 925-8522

**Northeast Region**
225 S. Silke Road  
Colville, WA 99114  
Tel: (509) 684-7474  
Fax: (509) 684-7484  
fp_ne@dnr.wa.gov

**Includes**: Adams, Asotin, Benton, Chelan, Columbia, Douglas, Franklin, Garfield, Grant, Kittitas, Klickitat, Skamania, Walla Walla, Whitman, and Yakima counties

**Includes**: Ferry, Lincoln, Okanogan, Pend Oreille, Spokane, and Stevens counties

FPA/N forms can be found on DNR’s Forest Practices website here: https://www.dnr.wa.gov/programs-and-services/forest-practices. They are also available at DNR Region offices. These forms must be legible for electronic scanning. Please:

- Type or print in ink.
- Do not use whiteout. Cross out mistakes and initial your changes.
- Do not write in the margins.
- Include additional information in Question 28 or on a separate page referencing the question number.
- Include an Activity Map. Activity Map standards are included in these instructions (page 23). Maps are available at DNR Region offices or can be downloaded from the DNR Forest Practices website here: https://www.dnr.wa.gov/programs-and-services/forest-practices.
- Use additional maps to help explain the proposal, if needed.
- Mail or hand deliver complete FPA/N packet to your local DNR Region office (addresses listed in the table above).

DNR will notify you when your FPA/N has been accepted as complete. If your FPA/N is determined to be incomplete, DNR will contact you to explain why.

### Laws and Rules

The Revised Code of Washington (RCW) provides the state laws for forest practices in Chapter 76.09 RCW and Chapter 76.13 RCW. Forest Practices rules are provided in Washington Administrative Code (WAC) 222. Technical guidance and assistance can be found in the Forest Practices Board Manual. Copies of the laws and rules can be found here: https://www.dnr.wa.gov/programs-and-services/forest-practices and at DNR Region offices.

### Hazardous Leave Trees & Utility Lines

Trees left within a tree length and a half of electrical lines have the potential to fall into electrical utility lines resulting in serious consequences. Not only can they injure people or property near the line, but hitting a line may cause power outages, surges, fires, and other damage. Downed lines still conducting electricity are especially dangerous. If leaving trees within this area consult with the local utilities provider.
Logger Safety Initiative (LSI)

The Logger Safety Initiative (LSI) is a partnership between private landowners, loggers, the DNR, and the Department of Labor and Industries (L&I). The goal of LSI is to reduce the frequency and severity of logging injuries by creating a culture of safety within the logging industry. Participating loggers have agreed to follow a rigorous safety plan, report new jobsite locations within 48 hours of beginning work, and maintain good standing with L&I and industrial insurance (workers compensation) hours to reduce the unpaid premium exposure to landowners. For more information on LSI go to www.LoggerSafety.org

Forest Practices Application/Notification Fees

Forest Practices fees are charged for *timber harvest and conversion activities only* (see table below). Make checks payable to 'Department of Natural Resources'.

<table>
<thead>
<tr>
<th>Type of Activity</th>
<th>New FPA</th>
<th>Renewal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Timber harvest and/or Salvage</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Small Forest Landowners (SFLO) that have harvested no more than an average volume of two million board feet/year during the past three years AND this FPA is for single contiguous ownership of one or more parcels</td>
<td>$100</td>
<td>$100</td>
</tr>
<tr>
<td>SFLO harvesting timber on non-contiguous units</td>
<td>$150</td>
<td>$150</td>

<td>$150</td>
</tr>
</tbody>
</table>
| *On forest land within the city limits or urban growth area where landowner includes the following with their FPA:*  
  1) a letter signed by the landowner AND Local Government Entity (LGE) stating the landowner will not convert the land to a non-forestry use for ten years; AND  
  2) a written ten-year management plan approved by DNR | $100 (SFLO) | $100 (SFLO) |
| * Landowner with 20 or more contiguous acres of forest land inside the city limits or urban growth area where regulatory authority has been transferred to the Local Government Entity (LGE) AND their FPA includes the following:*  
  1) a letter signed by the landowner AND the LGE stating the landowner will not convert the land to a non-forestry use for ten years; AND  
  2) a written ten-year forest management plan approved by the DNR | $150 | $150 |
| Conversion of land to non-forestry use | $1500 | $150 |
| Activities not listed above | $0 | $0 |

*Note: An additional fee will be charged for resubmittals that are more than 45 days after the original FPA had been withdrawn/disapproved.*

Reference: RCW 76.09.065 and RCW 76.09.450

Permits from Other Agencies

Additional permits may be required by the Department of Ecology if you are converting land to another use. If your construction project involves one or more acres, and will potentially discharge stormwater to typed Waters or wetlands, then you will need to obtain a Construction Stormwater General Permit before operating. Permit applications and related documents can be found online at: http://www.ecy.wa.gov/programs/wq/stormwater/construction or obtained from the Water Quality Program, Department of Ecology, P.O. Box 47600, Olympia, WA, 98504-7600; (360) 407-6600.
Help for Small Forest Landowners

The Small Forest Landowner Office serves as a resource for people who own forest land as defined in RCW 76.09.450. Stewardship and Technical Assistance Foresters are located in Region offices around the state to offer the following types of assistance to small forest landowners:

- **Long-Term Application:** Landowners may apply for a Long-term Forest Practices Application/Notification (FPA/N) that will be valid for 4-15 years rather than the standard 3-year FPA/N. This application may require more work than the 3-year FPA/N, but allows the landowner more flexibility over time.

- **Forest Stewardship Program:** This program provides on-site forest management advice and help with the development of Forest Stewardship/Forest Management Plans. A Forest Stewardship Plan/Forest Management Plan could make you eligible for cost share, certification, or recognition programs. Forest Stewardship/Forest Management Plans are intended to:
  - Help landowners better understand current forest conditions and future management needs and opportunities, integrating all of the forests resources.
  - Provide an outline of management activities to help landowners protect, improve, or restore the health and productivity of forest resources, attain their individual ownership objectives, and provide for long-term sustainable forest management.
  - Provide useful information to anyone with a current or future interest in the property, including heirs and subsequent owners.
  - Allow landowners to meet the “written forest management plan” requirements for the Forest Stewardship Program which is administered by Washington State Department of Natural Resources (DNR) in cooperation with USDA Forest Service - State and Private Forestry Programs.
  - A DNR-approved Forest Stewardship or Forest Management Plan is required to be eligible for “Stewardship Forest” recognition (property sign) and may be a requirement for the Eastern Washington Forest Landowner Cost-Share Program (improvement of forest health and reduction of wildfire and bark beetle risk) administered by DNR.

- **Alternate plans:** These plans allow for more flexibility than the forest practices rules typically allow by implementing site-specific management plans to provide adequate resource protection.

- **Forestry Riparian Easement Program (FREP):** When harvesting near a stream, a riparian forest buffer is required to be left to protect the aquatic resource. FREP offers compensation to landowners for timber that is required by law to be left in the Riparian Management Zone. For more information, contact the FREP Manager at (360) 902-1427.

- **Family Forest Fish Passage Program (FFFFP):** FFFFFP offers funding to assist small forest landowners in replacing or removing culverts and/or bridges that have been identified as a barrier to fish passage. For more information, contact the FFFFFP Manager at (360) 902-1404.

- **Forest Practices Technical Assistance:** Stewardship and Technical Assistance Foresters can provide on-site technical assistance to small forest landowners with understanding the Forest Practices Act and rules and navigating the Forest Practices application process. They can assist with unit layout, RMZ delineation, harvest systems, road layout, alternate plans, exempt 20-acre harvest activities, long-term applications, low impact harvest activities, and any general Forest Practices related questions. For more information contact the Small Forest Landowner Office at (360) 902-1415.

- **Washington State University Extension Services and/or DNR- Sponsored Activities:**
  - Coached Planning Short Course: This is a series of weekly classes for a period of 9 weeks where landowners learn how to assess their trees, avoid insect and disease problems, attract wildlife, and take practical steps to keep their forest on track to provide enjoyment and income for years to come. In this class, they develop their own Forest Stewardship Plan, which brings state recognition as a Stewardship Forest and eligibility for cost-share assistance, and may also qualify them for significant property tax reductions.
  - Family Forest Owner Field Day: This is a one-day “out in the woods” event that provides practical “how to” information that will prepare landowners to plan and execute sound practices, enable them to accomplish their management objectives, reduce risks, and protect their financial investment. This event includes classes and activities lead by experts in forest and range health, wildlife habitat, grazing, soils, fire protection, and timber and non-timber forest products.

For more information on the opportunities for small forest landowners, visit [www.dnr.wa.gov/sflo](http://www.dnr.wa.gov/sflo) or call the Small Forest Landowner Office at (360) 902-1415.
Forest Practices Application/Notification Instructions
Eastern Washington
(Does NOT include the Wind River drainage in Skamania County)

1. **Legal Name of LANDOWNER | Legal Name of TIMBER OWNER | Legal Name of OPERATOR**

   Enter the legal name, address, and phone number of the landowner, timber owner, and operator. If the timber owner and/or operator boxes are the same as the landowner, check the ‘Same as Landowner’ box. Email addresses are optional. DNR will mail copies of the Notice of Decision to the landowner, timber owner, and operator. Notify the DNR of any changes to these by submitting a Notice of Transfer form.

2. **Contact Person**

   Enter the name and phone number of the primary contact person. This person will be contacted if additional information is needed and notified when the FPA/N has been processed. Information on additional contacts can be provided in Question 28. DNR will not send copies of the Notice of Decision to the contact person.

3. **Are you converting the land to non-forestry use within 3 years of harvest?**

   Answer ‘yes’ if you are taking the land out of forestry use (such as converting to pasture, crops, home-site, etc.). Make sure to mark ‘Reforestation Not Required’ in Question 20. You must include a SEPA Environmental Checklist and SEPA determination (if applicable) and copy of clearing and/or grading permit (if applicable).

   Answer ‘no’ if you are keeping the land in forestry use. If you answer ‘no,’ the county or city may deny all development permits on this parcel for the next 6 years. Please contact the county or city for more information.

   **References:** RCW 76.09.060(3), WAC 222-20-050

4. **If you are harvesting timber, enter the Forest Tax Number of the Timber Owner?**

   Enter the 9-digit Forest Tax Number of the timber owner. Contact the Washington State Department of Revenue’s Forest Tax Program at (800) 548-8829 to obtain a forest tax number. Tax forms and information can be obtained at: [http://www.dor.wa.gov](http://www.dor.wa.gov).

   Check ‘yes’ if you are eligible for the Enhanced Aquatic Resources Requirements (EARR) Tax Credit. You may be eligible if you are paying forest tax on this timber harvest and your harvest is impacted by certain forest practices rules. State law requires the applicant to answer this question and for DNR to verify it. DNR’s verification will be documented on the Notice of Decision page. Check ‘yes’ if:

   - Any portion of your timber haul route is within an approved Road Maintenance and Abandonment Plan (RMAP). This includes small forest landowner Checklist RMAP; or
   - This timber harvest is limited due to the Forest Practices rules, Habitat Conservation Plan (HCP), or Approved Watershed Analysis in riparian areas, wetlands, and/or potentially unstable slopes.

   Check ‘no’ if none of the above apply.

   **Reference:** RCW 84.33.0775

5. **Are you a small forest landowner per RCW 76.09.450?**

   See small forest landowner expectations in RCW 76.09.450. Answer ‘yes’ if you have harvested, on average, less than 2 million board feet of timber per year in the last three years from your ownership in the state AND you certify that you do not expect to harvest more than an average of 2 million board feet of timber per year over the next ten years. Check all that apply.

   Otherwise, answer ‘no’. Continue to Question 6.

   **My entire proposed harvest area is on a single contiguous ownership consisting of one or more parcels.**

   Check this box if your entire proposed harvest area is on a single parcel, or if your entire proposed harvest area is on contiguous ownership of one or more parcels.

   If your FPA/N includes more than one harvest unit that does not touch AND you have identified more than one parcel number within this FPA/N, attach a map that shows your ownership between the harvest units. Refer to Activity Map Requirements for examples.

   **My proposed forest practices activities are within an area covered by an approved Forest Stewardship Plan or Forest Management Plan developed in cooperation with DNR.**

   Check this box if you worked with the DNR Small Forest Landowner Office to develop a Forest Stewardship or Forest Management Plan to cover these activities. If you are unsure of what a Forest Stewardship or a Forest Management Plan are, contact the Small Forest Landowner Office at (360) 902-1415.

   **I received technical assistance from a DNR small forest landowner Stewardship and Technical Assistance Forester in preparing this FPA/N.**
Check this box if you received technical assistance which could include a site visit, phone call, or correspondence with a Small Forest Landowner Stewardship and Technical Assistance Forester.

I have participated in a Washington State University Extension Service and/or DNR-sponsored Forest Stewardship Coached Planning course.

Check this box if you participated in this 9-week session where you may have developed a Forest Stewardship plan. If you are unsure whether or not you participated in the course, contact the Small Forest Landowner Office at (360) 902-1415.

I have attended a Washington State University Extension Service and/or DNR-sponsored Family Forest Owner Field Day.

Check this box if you have participated in a Washington State University Extension Service and/or DNR-sponsored Family Forest Owner Field Day which is a one-day “out in the woods” event. If you are unsure if you participated in this event, contact the Small Forest Landowner Office at (360) 902-1415.

Reference: RCW 76.09.450

6. Are you substituting prescriptions from an approved state or federal conservation agreement or Watershed Analysis?

Answer ‘yes’ if you are substituting prescriptions from an approved state or federal conservation agreement or Watershed Analysis. If your land is within an approved Watershed Analysis area, you may be required to follow the prescriptions from the analysis. Contact your local DNR Region office to see if prescriptions apply. If you choose not to follow the required prescriptions, your FPA/N will be a Class IV-Special and will require a SEPA Environmental Checklist or SEPA determination. If your land is within a Watershed Analysis area that has approved prescriptions, complete a Watershed Analysis Worksheet (Appendix I) and submit it with the FPA/N.

Watershed Analyses can be found on the DNR Forest Practices website here: https://www.dnr.wa.gov/Watershed-analysis.

If you answered ‘yes’ because of an HCP:
- Write ‘HCP’ in the tables that apply.
- Include a copy of the HCP prescriptions and indicate which WACs are being substituted in Question 28 of your FPA/N or as an attachment (i.e. ‘crosswalk’) to your FPA/N.
- If you have HCP prescriptions or an HCP crosswalk on file with DNR, please reference which prescriptions you will be using and identify which WACs are being substituted.

If you answered ‘yes’ because of Watershed Analysis prescriptions:
- Write ‘prescriptions apply’ in the appropriate tables.
- Attach copies of the prescriptions.

Answer ‘no’ if you are not substituting prescriptions.

References: WAC 222-16-050(1)(d)(iii), Chapter 222-22 WAC, WAC 222-12-041

7. What is the legal description of your forest practice?

Example:

<table>
<thead>
<tr>
<th>Section</th>
<th>Township</th>
<th>Range</th>
<th>E/W</th>
<th>Tax Parcel Number</th>
<th>County</th>
</tr>
</thead>
<tbody>
<tr>
<td>30</td>
<td>8</td>
<td>10</td>
<td>E</td>
<td>123456789123456789123</td>
<td>Skamania</td>
</tr>
</tbody>
</table>

Enter the legal description of your forest practice (Section, Township, and Range [including east or west]).

Tax parcel numbers exist for all lands, except those that are designated as forest land of long-term commercial significance under the Growth Management Act (chapter 36.70A RCW). If you answered ‘yes’ in Question 5.a., include all parcel numbers.

Enter the county where the forest practice is located. For help, see your property deed or contact the county assessor’s office.

8. Have you reviewed this forest practices activity area to determine whether it may involve historic sites and/or Native American cultural resources?

Your FPA/N will be screened to determine whether it may involve cultural resources which WAC 222-16-010 defines as ‘archaeological and historic sites and artifacts, and traditional religious, ceremonial, and social uses and activities of affected Indian tribes.’ Most Native American cultural resources are not recorded in state or local databases. Before you submit your FPA/N, you are encouraged to contact the affected Indian Tribe(s). If you made any contacts, please provide this information in Question 28. For affected Indian tribe contact information, go to the Forest Practices Application Mapping Tool here: https://fpamt.dnr.wa.gov/default.aspx or contact your DNR Region office.
Areas most likely to contain cultural resources may include the following:
- Along defined ridge lines and saddles;
- Areas along and/or near natural Water including shorelines and terraces;
- Around rock outcrops and talus (rock rubble) slopes;
- In cedar and aspen stands containing older, scarred trees;
- Near springs and old wells;
- Around extractable mineral sources; or
- Areas in proximity to known cultural sites.

Examples of potentially important cultural resources:
- Native American graves and cairns (stacked rocks), historic graves, and cemeteries (protected by RCW 27.44.040 and chapter 68.60 RCW);
- Glyptic records (designs, names, dates carved or painted on rock) (protected by RCW 27.44.040 and RCW 27.53.060);
- Native American old camp and village sites, old cabins, barns, sheds, logging/mining/railroad camps, mills, mining operations, and their remnants;
- Arrowheads, other stone tools, and the stone flakes from making them, old fire pits, fire hearths, wood stoves, cans, bottles, ceramics, bricks, metal, lumber;
- Old trails, wagon roads, railroad grades, ditches, and utility lines;
- Caves, rock overhangs, and rock shelters historically used by humans, old rock walls, and old pits in talus slopes; and
- Culturally modified trees (trees modified by humans) such as old stripped bark, trunk with old blaze, name, date, or drawing.

Answer 'yes' if you have examined the area where you plan to conduct your forest practices activities for the presence of cultural resources.

If your FPA/N involves cultural resources:
- Contact the affected Indian tribe(s). WAC 222-20-120 includes options for meeting with the affected Indian tribe(s) with the objective of agreeing on a protection plan. Your DNR Region office can tell you which affected Indian tribe(s) you need to contact and how to document your communication. If you made any contacts, please provide this information in Question 28.
- Contact the Department of Archaeology and Historic Preservation (DAHP) at www.dahp.wa.gov if the cultural resource is an archaeological site to see if you need an Archaeological Excavation and Removal permit. See chapter 25-48 WAC.
- If you, DAHP, and the affected Indian tribe(s) have already agreed upon a protection plan for the cultural resources in your activity area, please document this agreement in Question 28.

Answer 'no' if you have not reviewed the forest practices activity area to determine whether it may involve historic sites and/or Native American cultural resources.

References: RCW 27.44.040, RCW 27.53.060, Chapter 68.60 RCW, WAC 222-16-010, WAC 222-20-120, chapters 25-48 WAC

9. Do you have a DNR approved Road Maintenance and Abandonment Plan (RMAP)?
   a. If no, skip to c.
      If yes, enter the RMAP number:________________________. continue to b.
      A Road Maintenance and Abandonment Plan (RMAP) is a forest road inventory and schedule for any needed road work. It is prepared by the landowner and approved by DNR. Large forest landowners are required to have an RMAP. A small forest landowner may submit an RMAP.
      Answer 'yes' if you have an RMAP and enter the RMAP number. Continue to b.
      Answer 'no' if you do not have an RMAP and skip to c.
   b. Is this Forest Practices Application/Notification for work that is included in this approved RMAP?
      Answer 'yes' if this FPA/N is to complete work that is included in an approved RMAP.
      Otherwise, answer 'no' and continue to c.
   c. Is a Checklist RMAP required?
      A Small Forest Landowner Checklist RMAP is a checklist of existing road conditions, but doesn't include a road work schedule like a standard RMAP. If you answered 'yes' to Question 5.a., use the following to see if a Checklist RMAP is required:
A. Is this FPA/N for timber harvest or salvage?
   Yes. Continue to B.
   No. A Checklist is not required.

B. Are you hauling timber on existing forest roads on your property?
   Yes. Continue to C.
   No. A Checklist is not required.

C. Do you own more than 80 acres of forest land in Washington State?
   Yes. A Checklist is required with this FPA/N.
   No. Continue to D.

D. Is this FPA/N on a block of forest land that contains more than 20 contiguous acres?
   Yes. A Checklist is required with this FPA/N.
   No. A Checklist is not required. Ask DNR for an informational brochure.

NOTE: Even if you do not have an RMAP requirement, your forest roads must still meet the road maintenance requirements in WAC 222-24-052. Contact the DNR Region office for RMAP information.

References: WAC 222-24-050, WAC 222-24-051, WAC 222-24-0511

10. Are there potentially unstable slopes or landforms in or around the area of your forest practices activity?
   Answer ‘yes’ if potentially unstable slopes or landforms are in or around the area of your forest practices activity.
   Complete and attach a Slope Stability Informational Form (Appendix D) and a map of the areas reviewed for and the locations of unstable slopes and landforms found. If applicable, attach a geotechnical memo, letter, or report prepared and stamped by a qualified expert. If operating on a rule-identified landform, attach a geotechnical report and SEPA Environmental Checklist. If using approved Watershed Analysis prescription(s), complete and attach the Watershed Analysis worksheet (Appendix I). Refer to Forest Practices Board Manual Section 16- Guidelines for Evaluating Potentially Unstable Slopes and Landforms for information on assessing and identifying areas for slope instability.
   Answer ‘no’ if potentially unstable slopes or landforms are not in or around the area of your forest practices activity.

References: WAC 222-16-050, WAC 222-10-030, Chapter 222-22 WAC

11. Is this forest practice application/notification (answer every question):
   a. A request for a multi-year permit?
      Multi-year permits are valid for 4 to 5 years (others are valid for 3 years). Not every FPA/N qualifies as a multi-year permit. To qualify, you must be:
      - Using prescriptions from an approved Watershed Analysis;
      - Performing roadwork from an approved Road Maintenance and Abandonment Plan that is scheduled to take longer than two years (Checklist RMAP does not qualify); or
      - Performing activities included in an approved alternate plan.
      Answer ‘yes’ if you are requesting a multi-year permit and check the box for the length requested.
      Otherwise, answer ‘no’.
      NOTE: Renewals of multi-year permits are valid for 3 years.
      Reference: WAC 222-20-015

   b. An Alternate Plan?
      Answer ‘yes’ if you are using an alternate plan. An alternate plan offers alternatives to certain Forest Practices rules. Requirements are detailed in WAC 222-12-040 and WAC 222-12-0401 and guidance is provided in Forest Practices Board Manual Section 21 - Guidelines for Alternate Plans. Attach alternate plan.
      Otherwise, answer ‘no’.
      References: WAC 222-12-040, WAC 222-12-0401

   c. For a funded Forest Family Fish Passage Program project?
      Answer ‘yes’ if this FPA/N is to complete a funded Forest Family Fish Passage Program (FFFPP) project.
      Otherwise, answer ‘no’.
      NOTE: If you are a Small Forest Landowner who would like to enroll in the FFFPP or for more information visit the Small Forest Landowner Office website here: https://www.dnr.wa.gov/sflo or contact your local DNR Region office.
d. **Within an urban growth area?**

Answer 'yes' if the proposed forest practices activity is an urban growth area. If you are unsure, contact your county planning department or assessor’s office.

If you answered ‘yes,’ include one of the following:

- SEPA Environmental Checklist and/or SEPA determination and copies of any required, approved, clearing and/or grading permits from the local government. Make sure your FPA/N reflects any SEPA conditions.
- A Conversion Option Harvest Plan (COHP). See Question 11g.
- A signed statement of intent to keep the property in forestry for ten years. Include a ten-year management plan.

Answer ‘no’ if the proposed forest practices activity is not within city limits or within an urban growth area.

*References: RCW 76.09.050, WAC 222-10-010, WAC 222-16-050(2)*

e. **Within a public park?**

Answer ‘yes’ if your proposed forest practices activity is within a public park and enter the name of the public park. A SEPA Environmental Checklist or SEPA determination is required unless you are harvesting/salvaging less than 5,000 board feet within a developed public park. Make sure your FPA/N reflects any SEPA conditions.

Otherwise, answer ‘no’.

*References: RCW 76.09.050, WAC 222-10-010, and WAC 222-16-050(1)(c)*

f. **Within 500 feet of a public park?**

Answer ‘yes’ if your proposed forest practices activity is within 500 feet of a public park. Enter the name of the public park.

Otherwise, answer ‘no’.

*Reference: WAC 222-20-100(1)*

g. **In an approved Conversion Option Harvest Plan (COHP) from the local government?**

A COHP is a city or county approved plan that allows you to harvest timber and keep the option to either convert or reforest when your property is located within an urban growth area. Not every county allows COHPs. Contact the local government planning department for more information.

Answer ‘yes’ if you have an approved COHP and include a copy.

Otherwise, answer ‘no’.

*References: WAC 222-16-010 and WAC 222-16-050(2)(c)(ii)*

h. **Within 200 feet of the Ordinary High Mark (OHWM) or floodway of Type S Water?**

Refer to RCW 90.58.030 for definition of ‘floodway’.

Type S Waters are considered ‘Shorelines of the State’ and activities within 200 feet of them are regulated by local governments.

Answer ‘yes’ if your proposed forest practices activity is within 200 feet of the OHWM or floodway of a Type S Water. You must contact the county and/or city in which your property is located to verify that proposed activities are in compliance with the local shorelines master plan. Your FPA/N needs to reflect any requirements of the shorelines master plan. Obtain a substantial development permit, if required, prior to conducting forest practices.

Otherwise, answer ‘no’.

*References: RCW 90.58.030, WAC 222-50-020(2)*

i. **Within 50 miles of saltwater AND do you own more than 500 acres of forest land in Washington state?**

Answer ‘yes’ and complete the Marbled Murrelet Form (Appendix J) if you are:

- Harvesting timber (including salvage) or constructing roads within 50 miles of saltwater; AND
- You own 500 acres or more forest land in Washington State, and you do not have an approved state and/or federal conservation agreement with prescriptions that include the marbled murrelet. If you have an agreement, submit a copy of the prescriptions (or reference the prescriptions on file at the DNR Region office) and list the forest practices rules that are being substituted.

Otherwise, answer ‘no’.

*Reference: WAC 222-16-080(1)(h)(vi)(A)*
j. In or directly adjacent to a potential Channel Migration Zone (CMZ)?
   Answer ‘yes’ if there is a potential CMZ in or directly adjacent to the proposal area. Complete and attach the CMZ Assessment Form (Appendix E). Refer to Forest Practices Board Manual Section 2 - Standard Methods for Identifying Bankfull Channel Features and Channel Migration Zones for information on assessing and identifying CMZs.

   Otherwise, answer ‘no’.

   Reference: WAC 222-16-010

You are required to verify all waters within 200 feet of your proposed forest practices activities prior to submitting a Forest Practices Application / Notification. Use the Water Type Classification Worksheet and/or a Water Type Modification Form to explain how you verified water types. See Water Typing Requirements in Appendix A for additional information.

****If not working in or over typed waters, skip to Question 16****

See Forest Practices Board Manual Section 5- Guidelines for Forest Practices Hydraulic Projects for more information. Consultation with DNR and Washington Department of Fish and Wildlife (WDFW) is recommended prior to submitting an FPA/N that includes hydraulic projects in Type S or F Waters to ensure all important factors are addressed in your particular project. Affected Indian tribes may be consulted for additional expertise.

12. Are you proposing any of the following projects NOT permitted by current HPAs from WDFW?

   Answer questions a, b, and c for all projects in or over Type S and F Water you propose to be permitted by the FPA/N. Do not include projects currently permitted by an existing HPA from WDFW.

   If the answer is ‘yes’ to one or all of questions (a) through (c), WDFW will conduct a concurrence review of your plan per WAC 222-20-017(4)(b). DNR will facilitate this review.

   Reference: WAC 222-20-017(4)(b)

13. Have you consulted with DNR and/or WDFW about the proposed hydraulic project(s) in or over Type S or F Water?

   Consultation with DNR and WDFW prior to submitting an FPA with a hydraulic project in Type S or F Water(s) is recommended.

   Answer ‘yes’ if you consulted with DNR and/or WDFW for projects you proposed in this FPA/N. This question is not referring to consultation that was done for existing HPAs issued by WDFW. If yes, please attach documentation (ICN, etc.) of the consultation or include ICN number in Question 28.

   Otherwise, answer ‘no’.

   Reference: WAC 222-20-017(2)

14. If installing, replacing, removing, or maintaining permanent or temporary structures in or over any typed water, complete the table below. Provide crossing locations and identifiers on your Activity Map. Provide plan details in Question 28 or attach plan to the FPA/N. Type S and F Waters require detailed plan information. Complex hydraulic projects in Type N Waters may also be required per WAC 222-24-042(2).

   Reference: WAC 222-24

   Example:

<table>

</tbody>
</table>
Existing HPAs issued by WDFW will be complied and enforced by WDFW until expiration. Plan details are **not** required for hydraulic projects permitted with an existing HPA.

** Fords and/or equipment crossings on Type S and F Waters may result in an unauthorized incidental take of certain endangered or threatened fish species. For more information, see ‘Background for the state’s Incidental Take Permits for certain endangered and threatened fish species’ following Question 22 of this document.

Crossing Identifier: Enter the number, letter, or combination of the two that corresponds with the identifier you used to show the crossing location on the Forest Practices Activity Map. Enter one unique identifier per crossing. Do not use S, F, or N.

**Water Type:** Indicate the water type at each crossing: S, F, Np, or Ns.

**Existing HPA number (if applicable):** If this project is permitted under an HPA issued by WDFW, enter the HPA number. Existing HPAs will be complied and enforced by WDFW until expiration. If the HPA expires before work is completed, you must submit a new FPA/N to complete the hydraulic project.

**HPA expiration date (if applicable):** If you entered an existing HPA number, an associated expiration date must be entered.

**Planned Activity:** Enter the type of activity you are planning to conduct in or over typed water: install, remove, replace, temporary, or structure maintenance. Temporary structures must be installed and removed within the timeframe of the approved FPA/N. If left in place between September 30 and June 15, crossing must be sized to pass fish and accommodate 100-year floods (WAC 222-24-041(5)). Refer to the Forest Practices Board Manual Section 5- Guidelines for Forest Practices Hydraulic Projects for best management practices.

**Structure:** Enter the type of structure involved in the project: bridge, ford, puncheon/fill, arch, pipe arch, round culvert, or other.

**Proposed Size:** Enter the width (in inches) and length (in feet) of the structure.

- Minimum structure sizes on Type S or F Waters will be evaluated by DNR based on fish protection standards per WAC 222-16-025.
- Minimum structure sizes in Type Np or Ns Waters:
  - Permanent culverts must be at least 24” for Type Np Waters and 18” for Type Ns Waters.
  - Structures must be large enough to pass 100-year flood level.
  - Structures must be large enough to pass woody debris.
  - Refer to Tables 2 and 3 in the Forest Practices Board Manual Section 5- Guidelines for Forest Practices Hydraulic Projects (Part 5) for guidance on determining culvert size in Type N Waters. Alternative sizing methods may be used if pre-approved by DNR.

**Culvert Design Method:** Enter the design method you used to determine culvert size in S and F Waters: no-slope, stream-simulation, hydraulic, or other. If an alternate method is used (‘other’), it must be pre-approved by DNR. Pre-application consultation on culvert design method is recommended. Refer to the Forest Practices Board Manual Section 5- Guidelines for Forest Practices Hydraulic Projects (Part 4.5.2) for more information.

**Channel Bed Width:** Enter channel bed width for Type S and F Water(s) only. Refer to the Forest Practices Board Manual Section 5- Guidelines for Forest Practices Hydraulic Projects (Part 4) for a thorough description on how to determine channel bed width for the purpose of designing water crossings.

**Stream Gradient:** Enter the average gradient for Type S and F Water(s) only.

**RMAP Project:** If the project is part of an RMAP, enter ‘y’. If not, enter ‘n’.

15. If conducting any of the following activities in or over typed water, complete the table below. Some activities will require identifiers on the Activity Map and/or may require additional information be included in Question 28.

<table>
<thead>
<tr>
<th><strong>Activity</strong></th>
<th>Type S Water</th>

**Existing HPAs issued by WDFW will be complied and enforced by WDFW until expiration. Plan details are not required for hydraulic projects permitted with an existing HPA.**

**Fords and/or equipment crossings on Type S and F Waters must be identified in Question 14.**

Check each box that applies to your proposal based on activity and water type.

- **Equipment Crossing:** If constructing equipment crossings over S or F Water, you must include this information in Question 14.
- **LWD Placement/Removal in Type S or F Waters:** In Question 28, describe whether large woody debris (LWD) will be placed in or removed from the stream, the location of the activity, the species and dimensions of LWD to be used, and approximate placement. Include designs.
- **Cable Yarding:** In Question 28, describe if wood will be yarded over or through the RMZ. If yarding through an RMZ, describe the methods of doing so:
  - Suspension: full, lead-end, etc.
  - Yarding corridors
- **Beaver Dam Removal:** In Question 28, describe the process of removal. Show the location on the Activity Map. Refer to the Forest Practices Board Manual Section 5- Guidelines for Forest Practices Hydraulic Projects (Part 10) for more information.
- **Felling and Bucking:** If felling and removing is expected along Type S or F Water, mitigation measures shall be implemented per WAC 222-30-050(1)(a). Describe those measures in Question 28, unless applying a previously permitted HPA.
- **Other:** Describe in Question 28. If applicable, show on Activity Map.

16. If constructing or abandoning forest roads, complete the table below. Show the road and crossing locations, with identifiers, on the Activity Map. Include abandonment plans for temporary roads and abandonment projects.

<table>
<thead>
<tr>
<th>Road Identifier (name, number)</th>
<th>Road Construction</th>
<th>Road Abandonment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Length (feet)</td>
<td>Steepest Side-slope (%)</td>

<tr>
<td>1200 Rd</td>
<td>900</td>
<td>25</td>
</tr>
<tr>
<td>2400 Rd</td>
<td></td>
<td>500</td>
</tr>
</tbody>
</table>

**Road Identifier:** Enter the same number or name of the road as shown on your Activity Map.

**Road Construction:** This includes new forest roads and any roadwork outside an existing forest road prism.

  - **Length:** Enter the total road construction length (in feet), including temporary roads.
  - **Steepest Side Slope:** Enter the percent (%) of the steepest side slope (not road grade) crossed during construction.

**Road Abandonment:** Include temporary roads and existing roads you plan to abandon. You must include a written plan that shows how the road will be abandoned to:

  - Control erosion,
  - Maintain water movement within wetlands and other natural drainages, and
  - Prevent four-wheeled highway vehicles from entering the point of closure.

  - **Length:** Enter the total road abandonment length (in feet).
  - **Abandonment Date:** Enter the date the abandonment will be completed by. This date must fall within the timeframe of the approved FPA/N.

*Contact the DNR Region office when road abandonment is complete. If the abandonment is acceptable, DNR will send written approval.*

17. If depositing spoils, and/or expanding or developing a rock pit for forestry use, complete the table below. Show locations and identifiers on the Activity Map.

<table>
<thead>
<tr>
<th>Spoil Area Identifier (letter, number)</th>
<th>Amount of Spoils Deposited (cubic yards)</th>
<th>Rock Pit Identifier (name, number, or letter)</th>
<th>Acres of New Rock Pit Developed</th>
<th>Acres of Existing Rock Pit Expanded</th>
</tr>
</thead>
<tbody>
<tr>
<td>X</td>
<td>100</td>
<td>1200 Pit</td>
<td>1</td>
<td>0.5</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1300 Pit</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Spoil Area Identifier: Enter a unique identifier of the spoil area. Show this on the Activity Map.

**Amount of Spoils Deposited (cubic yards):** Enter the spoil volume (in cubic yards). If timber will be cut or removed, show this as a separate harvest unit in Question 19.

**Rock Pit Identifier:** Enter the same name, number, or letter of the pit shown on the Activity Map.

**Acres of Rock Pit Developed:** Enter the number of acres of new rock pit that will be developed. **If a Surface Mine Reclamation Permit is needed for this pit - do not include it on this chart - instead put the amount of timber that will be removed for the project in Question 19.** *(Information on Surface Mine Reclamation permitting can be found here: https://www.dnr.wa.gov/programs-and-services/geology/energy-mining-and-minerals/surface-mining-and-reclamation).* Enter the acres of forest land that will be disturbed as part of the project. Show any timber cut as a separate harvest unit in Question 19. If the new rock pit includes more than one forest landowner, each landowner will need to sign the FPA/N or submit separate FPA/Ns.

**Acres of Rock Pit Expanded:** Enter the number of acres of existing rock pit expansion. **If a Surface Mine Reclamation Permit is needed for this pit - do not include it on this chart - instead put the amount of timber that will be removed for the project in Question 19.** *(Information on Surface Mine Reclamation permitting can be found here: https://www.dnr.wa.gov/programs-and-services/geology/energy-mining-and-minerals/surface-mining-and-reclamation).* Enter the acres of forest land that will be disturbed as part of the expansion project. Show any timber cut as a separate harvest unit in Question 19. If the rock pit includes more than one forest landowner, each landowner will need to sign the FPA/N or submit separate FPA/Ns.

Show the following on the Activity Map:
- Spoil areas and identifiers
- Location and identifiers of new and expanded rock pits

*Reference: WAC 222-24-060*

**18. If operating within 200 feet of a wetland that is not associated with a Type S or F Water, complete the table below.**

Wetlands associated with Type S or F water should be listed in Question 25. Show the boundaries of each wetland, along with its identifier, and Wetland Management Zone(s) (WMZ) on the Activity Map.

**Example:**

<table>
<thead>
<tr>
<th>Wetland Identifier (letter, number)</th>
<th>Wetland Type (A, B, Forested)</th>
<th>Planned Activities in Wetland</th>
<th>Planned Activities in Maximum Width WMZ</th>
<th>Total Wetland Acres</th>
<th>How many acres will be drained?</th>
<th>How many acres will be filled?</th>
</tr>
</thead>
<tbody>
<tr>
<td>W1</td>
<td>A</td>
<td>Road</td>
<td>Road</td>
<td>2.5</td>

<td>0.6</td>
</tr>
<tr>
<td>W2</td>
<td>B</td>
<td>None</td>
<td>Harvest</td>
<td>0.5</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>

**Wetland Identifier:** Enter a unique identifier for each wetland. Show identifiers on the Activity Map. Do not use S, F, N, A, or B.

**Wetland Type:** Enter the type of each separate wetland: A, B, or Forested. Include all types and sizes of wetlands that are proposed to be filled or drained. For timber harvest in forested wetlands, only include those that are greater than 3 acres in size. To determine wetland type, refer to WAC 222-16-035.

**Planned Activities in Wetland:** Enter the type of activity in each separate wetland or enter ‘none’ if no activity is planned. For timber harvest restrictions, refer to WAC 222-30-020.

**Planned Activities in Maximum Width WMZ:** Enter the type of activity in each separate wetland management zone. Describe the activities that will take place in Question 28. Include the harvest strategy such as distribution of cut or leave trees, leave tree clumps, openings created, WMZ width dimensions, and felling and yarding methods. Refer to WAC 222-30-020(8) for more information.

**Total Wetland Area:** Enter the total area (in acres) of each distinct wetland. Do not include forested wetlands less than 3 acres in size.

**How many acres will be drained?** Enter the total number of acres that will be drained for each wetland. If draining more than 0.5 acres of an individual wetland, include a SEPA Environmental Checklist or SEPA determination. For additional mapping and substitution requirements, refer to WAC 222-24-015 and Forest Practices Board Manual Section 8- Guidelines for Wetland Delineation and Section 9- Guidelines for Wetland Replacement by Substitution or Enhancement.

**How many acres will be filled?** Enter the total acres that will be filled for each separate wetland. If filling more than 0.5 acres of an individual wetland, include a SEPA Environmental Checklist or SEPA determination. For additional mapping...
and substitution requirements, refer to WAC 222-24-015 and Forest Practices Board Manual Section 8- Guidelines for Wetland Delineation and Section 9- Guidelines for Wetland Replacement by Substitution or Enhancement.

Show the following on the Activity Map:
- Boundaries, types (A, B, and/or forested wetlands greater than 3 acres), and identifiers of all wetlands within 200 feet of the proposed forest practices activity
- Wetland management zones (WMZs)

References: WAC 222-16-035, WAC 222-16-036, WAC 222-30-020

****If not harvesting or salvaging timber, skip to Question 27. ****

19. If harvesting or salvaging timber, complete the table below. Show all harvest areas and unit numbers on the Activity Map. For even-aged harvest units also show surrounding stand information on the Activity Map.

Example:

| Unit Number | Harvest Type (Even-aged, Uneven-aged, Salvage, Right-of-Way) | Biomass Harvest (Y/N) | Harvest Method (rubber tired skidder, tracked skidder, dozer, shovel, full suspension cable, leading end suspension cable, helicopter, cable assist/tethered logging, animal, chipper, forwarder, slash bundler) | Acres to be Harvested | Volume to be Harvested | Biomass Volume to be Harvested | Salvage Volume to be Harvested | Estimated Number of Trees per acre Remaining after Harvest | Steepest Slope in Harvest Unit (%)

</tr>
</tbody>
</table>

Unit number: Each individual harvest unit must have a unique unit number. Do not use letters or symbols. An individual harvest unit may be crossed by roads or streams with single-wide RMZs and still be shown as one harvest unit. A harvest unit crossed by a double-wide RMZ must be shown as two individual harvest units and identified by different, unique unit numbers. Show the harvest unit number(s) on the Activity Map. The applicant may be asked to provide directions or a map to the harvest unit(s).

Harvest Type: Enter one of the following for each unit: Even-aged, Uneven-aged, Salvage, Right-of-Way, Even-aged and Salvage, Uneven-aged and Salvage, Right-of-Way and Salvage, Even-aged and Right-of-Way, or Uneven-aged and Right-of-Way. See below and refer to WAC 222-16-010 for definitions of each harvest type.

Even-aged Methods: The following harvest types are defined as even-aged methods. See WAC 222-16-010 for a complete definition.
- Clearcut: If clearcutting on islands, refer to WAC 222-30-110.
- Seed tree: If leaving 20 or fewer trees per acre that are at least 10 inches in diameter with at least 1/3 live crown.
- Shelter-wood: If leaving 20 or fewer trees per acre that are at least 10 inches in diameter with at least 1/3 live crown.
- Shelter-wood: If leaving less than 150 trees per acre that are at least 5 years old or on average 4 feet in height
- Partial cutting: If leaving less than 50 trees per acre that are at least 10 inches in diameter with at least 1/3 live crown.
- Over-story removal: Harvest of more than 5,000 bf per acre and leaving less than 50 trees per acre that are at least 10 feet high.
- Other methods: If leaving 6 or fewer trees per acre that are at least 10 inches in diameter with at least 1/3 live crown.

Uneven-aged Methods: Any removal of standing trees other than those listed under Even-aged Methods.

Salvage: Removing individual snags, down logs, windthrow, stumps, bolts, dead, or dying timber.
Right-of-way: Areas harvested to allow for road construction, rock pit development or expansion, or deposition of spoils from road construction and/or rock pit development.

Biomass Harvest (Y or N): Enter ‘Y’ if you are removing material to be transported for energy generation. If not, enter ‘N’.

Harvest Method: Enter one or more of the following for each harvest unit: ground-based (rubber tired skidder, tracked skidder, dozer, shovel), cable-based (full suspension cable, leading end suspension cable), helicopter, or other (cable assist/tethered logging, animal, chipper, forwarder, slash bundler). If a cable harvest system is within the same unit as a ground based harvest system, provide details in Question 28 or indicate on the Activity Map which area will be utilizing each harvest system.

Acres to be Harvested: Enter the approximate number of acres to be harvested in each unit.

Volume to be Harvested (mbf): Enter the approximate volume in thousand board feet (mbf) that will be harvested (including salvage). Example: 13,000 board feet = 13 mbf.

Biomass Volume to be Harvested (tonnage): Enter the approximate tonnage of biomass material that will be harvested.

Volume to be Harvested (%): Enter the approximate percent (%) of the volume removed for each unit.

Estimated Number of Trees per Acre Remaining after Harvest: Enter the number of trees per acre remaining after harvest. This number includes wildlife reserve trees and green recruitment trees.

- Less than 10” dbh. Enter the average number of trees per acre that are less than 10 inches in diameter at breast height (4.5 feet).
- Greater than or equal to 10” dbh. Enter the average number of trees per acre that are greater than or equal to 10 inches in diameter at breast height (4.5 feet).

Steepest Slope in Harvest Unit (%): Enter the percent (%) of the steepest slope within the unit.

Show the following on the Activity Map:
- Unit boundaries and numbers as identified in the table above. Harvest units crossed by a double-wide RMZ must be shown as two separate units.
- Clumped wildlife reserve trees (WRTs) and green recruitment trees (GRTs) within even-aged harvest units.
- Landings.
- Surrounding stand (‘green up’) information on even-aged harvest units:
  ▪ Land ownership: If land adjacent to the proposed harvest unit is not forest land, label it ‘Not Forest Land.’ If the adjacent land is owned by a different landowner, write ‘Not Owned.’
  ▪ Location of adjacent stands.
  ▪ Estimated average of each stand’s forest age-class.
  ▪ Estimated linear feet of the perimeter of (total distance around) each harvest unit by age-class.
  ▪ Estimated total acres of contiguous stands that are less than 4 feet tall or 5 years old or less, on land owned by the same landowner.

References: WAC 222-16-010, WAC 222-30-025, WAC 222-24-060, WAC 222-16-050, WAC 222-30-020(12)(c), WAC 222-34-010

20. Reforestation. Check all that apply.

Example:

[ ] Planting. Tree Species: ______________________

[ ] Natural. Include a Natural Regeneration Plan. A sample plan is included in Appendix H.

[X] Not required because of one or more of the following:
  [ ] I am converting some or all of this land to non-forest land in the next 3 years or lands are exempted under WAC 222-34-050.
  [X] Individual dead, dying, down, or windthrown trees will be salvaged.
  [ ] Trees are removed under a thinning program reasonably expected to maximize the long-term productivity of commercial timber.
  [X] I am leaving at least 100 vigorous, undamaged, and well-distributed saplings or merchantable trees per acre.
  [ ] An average of 150 tree seedlings per acre are established on the harvest area and my harvest will not damage it.
  [ ] Road right-of-way or rock pit development harvest only.
Reforestation can be artificial (planting tree seedlings) or natural (relying on leave trees to re-seed).

Reference: WAC 222-34-010

****If you own MORE than 80 acres of forest land in Washington, skip to Question 25. ****

21. Are you using the exempt 20-acre parcel riparian management zone (RMZ) rule (WAC 222-30-023) on Type S, F, or Np Waters?

Refer to WAC 222-30-023 for exempt 20-acre rules. Use A -E below to see if you qualify to use this rule. If you answered 'yes,' continue to Question 22 to see if you will be covered by the DNR’s Incidental Take Permit for certain threatened and endangered fish species.

**Use the following to see if you qualify to use the exempt 20-acre riparian management zones (RMZs).**

A. Has the water type been field verified?
   - Yes: Continue to B.
   - No: Contact your local DNR Region office for assistance with verifying your water type.

B. Is there a Watershed Analysis Riparian Prescription in effect as of 1/1/99 (ask your local DNR Region office)?
   - Yes: You do not qualify to use the exempt 20-acre RMZ rule. Instead, you must follow the prescription. Answer ‘no’ to Question 21 and continue to Question 25.
   - No: Continue to C.

C. Do you own less than 80 acres of forest land in the state?
   - Yes: Continue to D.
   - No: You do not qualify to use the exempt 20-acre RMZ rule. Answer ‘no’ to Question 21 and continue to Question 25.

D. Is this forest practice on tax parcels that are 20 contiguous acres or less? See RCW 76.09.020 for definition of ‘contiguous’.
   - Yes: Continue to E.
   - No: You do not qualify to use the exempt 20-acre RMZ rule. Answer ‘no’ to Question 21 and skip to Question 25.

E. You qualify to use the exempt 20-acre RMZ rules, however if you do, you may not be covered under the DNR’s Incidental Take Permit.

22. Choose the answer below that best fits your situation. Show all RMZs on the Activity Map.

[ ] a. ALL of the following apply to me and my land: (If no, answer b.)
   - Between June 5, 2006 and today’s date I have always owned less than 80 acres of forest land in Washington.
   - Between June 5, 2006 and today’s date this parcel has always been 20 acres or less of contiguous ownership. See RCW 76.09.020 for definition of ‘contiguous’.
   - Between June 5, 2006 and today’s date this parcel has always been owned by me or someone else that has owned less than 80 acres of forest land in Washington.

If all of the above apply to you and your land, you are authorized* under the State’s Incidental Take Permits if you use the exempt 20-acre RMZ rule.

*This authorization is subject to change depending on changes to habitat. Please contact your local DNR Region office for the most current information.

b. ONE OR MORE of the following apply to me and/or my land. Mark all that apply:

[ ] I currently own more than 80 acres of forest land in Washington.

[ ] Between June 5, 2006 and today’s date I have owned more than 80 acres of forest land in Washington.

[ ] Between June 5, 2006 and today’s date this parcel has been a part of more than 20 acres of contiguous ownership. See RCW 76.09.020 for definition of ‘contiguous’.

[ ] Between June 5, 2006 and today’s date this parcel has been owned by someone that has owned more than 80 forested acres in Washington.

If any of the above (in b) applies to you and/or your land AND you use the exempt 20-acre RMZ rule on your forest land, you are not authorized under the State’s Incidental Take Permits.

You will be authorized if you use the standard RMZ buffers in Questions 25 and 26.
Background for the state’s Incidental Take Permits for certain endangered and threatened fish species:
- The U.S. Fish and Wildlife Service and the National Marine Fisheries Service have listed some fish species in Washington State as threatened or endangered under the Endangered Species Act (ESA).
- Cutting trees along streams, using equipment crossings or fords on fish-bearing streams, or certain types of mitigation can affect threatened or endangered fish and cause ‘incidental take,’ as defined in the ESA.
- If you cause ‘incidental take’ without authorization, you may be in violation of the ESA.
- The state received authorization (called Incidental Take Permits) for ‘incidental take’ of listed fish.
- If you use the RMZ buffers described in Questions 25 and 26, you are authorized under the State’s Incidental Take Permits.
- Activities that are NOT authorized under the Incidental Take Permits:
  - If you use the exempt 20-acre RMZ rule, you may not be authorized under the State’s Incidental Take Permits. Complete Question 22 above to see if you and your property are authorized under the State’s Incidental Take Permits.
  - Equipment crossings or fords on Type S and F Waters are not authorized activities under the state’s Incidental Take Permits.
  - Site-specific mitigation for non-road-related FPHPs is not authorized under the state’s Incidental Take Permits.

Reference: For more information on Incidental Take permits, refer to the ‘Forest Practices Habitat Conservation Plan’ (FPHCP) at http://www.dnr.wa.gov/programs-and-services/forest-practices/wa-statefish/forest-practices-habitat-conservation-plan. The FPHCP has a complete list of species covered by the FPHCP in Table 1.3 on pages 25-28.

23. If harvesting within 345 feet of a type S or F Water on an exempt 20-acre parcel, complete the table below. Show RMZs and stream segment identifiers on the Activity Map. If you are harvesting within 75 feet or within the maximum RMZ (whichever is less), stream shade must be assessed and met following harvest. Describe in Question 28 how stream shade was determined to be met, using the ‘Appendix F. Stream Shade Assessment Worksheet’ if necessary. Refer to the Forest Practices Board Manual Section 1 - Method for Determination of Adequate Shade Requirements on Streams for more information.

Example 1: If the maximum RMZ is 58 feet and you plan on harvesting trees within 58 feet of a type S or F Water, you need to evaluate the available shade from trees within 58 feet of the water.

Example 2: If the maximum RMZ is 345 feet and you plan on harvesting trees within 345 feet of a type S or F Water, you need to evaluate the available shade from trees within only 75 feet of the water.

EXCEPTION: WAC 222-30-040(5) allows the harvest of shade trees for constructing and maintaining road crossings and for yarding corridors.

<table>
<thead>
<tr>
<th>Stream Segment Identifier (letter)</th>
<th>Segment Length (feet)</th>
<th>Adjacent Harvest Type (partial cut or other)</th>
<th>RMZ Maximum Width (feet)</th>
<th>Are you harvesting within the maximum RMZ? (Y or N)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>560</td>
<td>partial</td>
<td>58</td>
<td>N</td>
</tr>
<tr>
<td>B</td>
<td>300</td>
<td>other</td>
<td>345</td>
<td>Y</td>
</tr>
</tbody>
</table>

Stream Segment Identifier: Enter a unique letter to identify each stream segment. Do not use S, F, or N. Show the identifiers on the Activity Map.

Segment Length: Enter the length of the stream segment in feet.

Adjacent Harvest Type: Enter ‘partial cut’ if the adjacent harvest unit is partial cut as defined in WAC 222-16-010. Enter ‘other’ if the adjacent harvest unit is not a partial cut.

RMZ Maximum Width: Enter the ‘RMZ Maximum Width’ of 58 or 345 feet per WAC 222-30-023(2)(c).

Are you harvesting within the maximum RMZ? Enter ‘yes’ if you are harvesting within the maximum width. Otherwise, enter ‘no’. You may harvest within the maximum RMZ if:
- Shade requirements have been met to maintain stream temperature.
- You leave trees as required by WAC 222-30-023(2)(c) or (d).

Show the following on the Activity Map:
- Stream segment identifiers. Do not use the letters S, F, or N.
- Riparian management zones

References: WAC 222-30-023, WAC 222-30-040, WAC 222-30-060
24. Are you harvesting within 29 feet of a Type Np Water on an exempt 20-acre parcel?

Answer ‘yes’ if you will be harvesting within 29 feet on a Type Np Water on an exempt 20-acre parcel. Describe your leave tree strategy in Question 28. Your leave tree strategy must be arranged to accommodate the following on EACH side of the Np Water:

- Leave at least 29 conifer or deciduous trees every 1000 lineal feet
- Leave trees are within 29 feet of bankfull width
- Leave trees need to be 6 inches in diameter or larger

Answer ‘no’ if you are not and skip to Question 27.

Show the following on the Activity Map:

- Stream segment identifiers. Do not use the letters S, F, or N.
- Riparian management zones

25. If harvesting within 130 feet of any Type S or F Water or periodically inundated areas of their associated wetlands, complete the table below. Document how the inner zone harvest meets the stand requirements for Desired Future Conditions, unless you are using HCP prescriptions. Show RMZs, CMZs, and stream segment identifiers on the Activity Map. If you are harvesting within 75 feet or within the maximum RMZ (whichever is less), stream shade must be assessed and met following harvest. Describe in Question 28 how stream shade was determined to be met or use the ‘Appendix F. Stream Shade Assessment Worksheet’ if necessary. Refer to Forest Practices Board Manual Section 1-Method for Determination of Adequate Shade Requirements on Streams for more information.

<table>
<thead>
<tr>
<th>Stream Segment Identifier (letter)</th>

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Stream Segment Identifier: Enter a unique identifier (letter) for each stream segment. Do not use the letters S, F, or N.

Water Type: For non-HCP lands, enter the Water type (S or F) for each stream segment identifier. If the landowner is substituting prescriptions from an approved HCP, write ‘HCP’ in the space and attach or reference HCP prescriptions and/or crosswalks on file at the DNR Region office.

Site Class: Enter the site class. Site class maps are available on the Forest Practices website here: https://www.dnr.wa.gov/programs-and-services/forest-practices or from DNR Region offices.

Stream Width: The stream width is the bankfull width. Refer to the Forest Practices Board Manual Section 2-Standard Methods for Identifying Bankfull Channel Features and Channel Migration Zones for more information.

Is there a CMZ? Enter ‘yes’ if there is a CMZ present, otherwise enter ‘no’. If there is a CMZ present, include details of the physical and historical evidence used to delineate the CMZ on the ground in Question 28. Complete and submit the CMZ Assessment Form (Appendix E). For more information, refer to the Forest Practices Board Manual Section 2-Standard Methods for Identifying Bankfull Channel Features and Channel Migration Zones.

RMZ Harvest Code(s):

- Treat each side of a stream as a separate RMZ segment.
- Measure RMZs for Type S or F Waters horizontally from the outer edge of the BFW or CMZ, whichever is greater.
- Shade Requirements for S and F Waters: Leave all appropriate shade if you are harvesting within 75 feet of the BFW or CMZ, whichever is greater. Include stream shade analysis calculations when you are harvesting trees within the maximum RMZ or 75 feet, whichever is less. Refer to the Forest Practices Board Manual Section 1-Method for Determination of Adequate Shade Requirements on Streams for guidance. EXCEPTION: WAC 222-30-040(5) allows the harvest of shade trees in connection with the construction and maintenance of road crossings or the creation and use of yarding corridors. See WAC 222-30-060 for yarding corridor restrictions.
Enter the code(s) from the table below

<table>
<thead>
<tr>
<th>RMZ HARVEST CODES</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A</strong> Alternate Plan. Enter this code if you are using an alternate plan. Include completed Alternate Plan template or attach narrative describing how riparian functions will be achieved in the short and long term.</td>
</tr>
</tbody>
</table>

**Inner Zone RMZ Harvest Codes.** Enter all that apply. For more information, refer to Forest Practices Board Manual Section 7- Guidelines for Riparian Management Zones (Appendix B). Desired Future Condition (DFC) Worksheet Version 3.0 is available at the Forest Practices website [here](#). This software allows you to print DFC calculations as required for harvest codes C-J.

| **B** No Inner Zone Harvest. Enter this code if you are not harvesting within the inner zone. |
| **C** Ponderosa Pine Habitat Type. Enter this code if the proposal is between 0’ and 2500’ elevation. Use the Ponderosa Pine Habitat Type inner zone width and stand requirements in WAC 222-30-022(1)(b)(i). |
| **D** Mixed Conifer Habitat Type. Enter this code if the proposal is between 2501’ and 5000’ elevation. Use the Mixed Conifer Habitat Type inner zone width and stand requirements in WAC 222-30-022(1)(b)(ii). |
| **E** High Elevation Habitat Type. Enter this code if the proposal is above 5000’ elevation. Use the High Elevation Habitat Type inner zone widths in WAC 222-30-021(1)(b)(iii) and the stand requirements in WAC 222-30-021(1)(b). DFC printout must be included. |
| **F** High Elevation Habitat Type- Hardwood Conversion. Enter this code if converting a hardwood-dominated stand within the inner zone to a conifer-dominated stand. Requirements for hardwood conversion can be found in WAC 222-30-021(1)(b)(i). Refer to the Hardwood Conversion Worksheet (Appendix C) for assistance. The following must be included: |
| - A DFC printout that shows the existing stand does not meet stand requirements; |
| - Evidence the unit can be converted to a conifer stand. Evidence includes conifer stumps, historical photos, soil information, and/or the presence of a conifer under-story; |
| - Evidence of adequate shade (refer to the Forest Practices Board Manual Section 1- Method for Determination of Adequate Shade Requirements on Streams); A detailed map of the stream for the proposed hardwood conversion unit that shows the ownership of a minimum of 500 feet upstream and downstream of the unit. Show the hardwood conversion units and no-harvest units on the map. Note: Each continuous hardwood conversion unit cannot be more than 500 feet in length; two hardwood conversion units will be considered ‘continuous’ unless the no-harvest area separating the two hardwood conversion areas is at least half the length of the larger of the two hardwood conversion areas; and The percent harvest proposed within the hardwood conversion units. |
| NOTE: Following hardwood conversion, the landowner must conduct post-harvest treatment of the site until the conifer trees necessary to meet stocking levels in WAC 222-34-010(2) have crowns above the brush or until the conversion area contains a minimum of 150 conifer trees greater than 8 inches dbh per acre. The landowner must notify the department, in writing, within 3 years of the approval of the FPA/N for hardwood conversion, if the hardwood conversion has been completed. |
| **G** Salvage in the Inner Zone. Enter this code if salvaging within the inner zone. DFC printout must be included. Snags and stumps may be salvaged if stand requirements are met. Down wood requirements for each habitat type must be met as outlined in WAC 222-30-022. |
| Reference: WAC 222-30-045(3) |
| **H** Stream-adjacent parallel road. If stand requirements cannot be met because of a stream-adjacent parallel road, use this code. The following must be included: |
| - DFC printout |
| - Basal area calculations for the road area within the core and inner zones; and |
| - A tree count if you are leaving trees to make up for a basal area deficiency. |
| Reference: WAC 222-30-022(1)(b)(iv) |
| **I** Constructing a new stream crossing. Enter this code if constructing a new stream crossing. If the crossing is not adjacent to a harvest unit, use only the trees within the right-of-way limits for basal area calculations. You may remove right-of-way trees in the core zone if they are not part of large woody debris (LWD) placement strategy and stand requirements are met. You may take the right-of-way trees in the inner zone if stand requirements are met. A DFC printout must be included. |
| Reference: WAC 222-30-022(1) |
The CMZ basal area calculations; Determine Using the tables in A copy of the approved HPA, if

The number of leave trees that will remain in the outer zone. Detailed plan for LWD placement;

July 2019: For use with FPA/N dated 10/1/2018

References: WAC 222

Total width of RMZ: [WAC 222-30-022(1)(c)] and choose only one of the following codes: O, P, Q, or R for each segment identifier to indicate your outer zone leave tree strategy. If a sensitive feature is present in the High Elevation Habitat Type outer zone, you must choose P (clumping). You may also choose P if sensitive features are not present in the high elevation habitat type outer zone. Sensitive features are listed in WAC 222-30-021(1)(c)(ii).

Road construction or day-lighting. Enter this code if constructing or day-lighting road within the inner zone. Proposals for new stream adjacent parallel roads require an on-site interdisciplinary (ID) team. DNR will invite the appropriate federal representative(s) to attend the ID team to determine if the proposal complies with the Endangered Species Act. Include a DFC printout.

Reference: WAC 222-30-022(1), WAC 222-24-020(2), WAC 222-16-010

-yarding Corridors. Enter this code if trees will be removed from the inner zone and include a copy of the DFC printout. Trees can be cut, but not removed from the core zone. Trees may be cut and removed from the inner zones of Ponderosa Pine and Mixed Conifer Habitat Types. In the inner zone of High Elevation Habitat Type, trees may be cut but may not be removed unless there is excess basal area.

Outer Zone RMZ Harvest Codes. Choose all that apply. If the proposal is above 5000’ elevation, use the High Elevation Habitat Type outer zone width [WAC 222-30-022(1)(c) and WAC 222-30-021(1)(c)] and choose only one of the following codes: O, P, Q, or R for each segment identifier to indicate your outer zone leave tree strategy. If a sensitive feature is present in the High Elevation Habitat Type outer zone, you must choose P (clumping). You may also choose P if sensitive features are not present in the high elevation habitat type outer zone. Sensitive features are listed in WAC 222-30-021(1)(c)(ii).

L No Outer Zone Harvest. Enter this code if you are not harvesting within the outer zone.

M Ponderosa Pine Habitat Type. Enter this code if the proposal is between 0’ and 2500’ elevation. Use the Ponderosa Pine Habitat Type outer zone width and leave ten dominant or co-dominant trees per acre, unless following an approved large woody debris placement plan as outlined in WAC 222030-022(1)(c)(ii).

N Mixed Conifer Habitat Type. Enter this code if the proposal is between 2501’ and 5000’ elevation. Use the Mixed Conifer Habitat Type outer zone width and leave fifteen dominant or co-dominant trees per acre, unless following an approved large woody debris placement plan as outlined in WAC 222030-022(1)(c)(ii).

O Dispersal (High Elevation Habitat Type only). Enter this code if leaving 20 trees per acre evenly dispersed.

P Clumping (High Elevation Habitat Type only). Enter this code if leaving 20 trees per acre clumped on sensitive features; or if a sensitive feature is not present, leaving well dispersed clumps throughout the outer zone.

Q Outer zone leave trees exchanged for CMZ basal area (High Elevation Habitat Type only). Enter this code if outer zone leave trees are being exchanged for CMZ basal area. The following must be included:

- The CMZ basal area calculations; and
- The number of leave trees that will remain in the outer zone.

R Outer zone leave trees exchanged for large woody debris (LWD) placement strategy. Enter this code if outer zone leave trees are being exchanged for LWD placement strategy. The following must be included with the FPA/N:

- Detailed plan for LWD placement; and
- A copy of the approved HPA, if applicable.

Reference: WAC 222-30-022(1)(c)(ii)

S Salvage. Enter this code if salvaging within the outer zone. Include a leave tree count that will remain after harvest. A downed wood count is needed if removing downed wood and may be required if needed to meet riparian leave tree requirements. Stumps and snags are not downed wood.

Reference: WAC 222-30-045

DFC Run Number: Enter the DFC Run Number shown on the top of your DFC worksheet and include the DFW worksheet. Desired Future Condition (DFC) Worksheet Version 3.0 program is available at the Forest Practices website here: https://fortress.wa.gov/dnr/protection/dfc/DfcRun.aspx.

Total width of RMZ: RMZ widths for Type S or F waters are dependent on stream width and site class.

1) Determine the site class. Site class maps are available on the Forest Practices website here: https://www.dnr.wa.gov/programs-and-services/forest-practices or from DNR Region offices.

2) Measure the bankfull width. Refer to the Forest Practices Board Manual Section 2- Standard Methods for Identifying Bankfull Channel Features and Channel Migration Zones for more information.

3) Using the tables in WAC 222-30-022, determine the RMZ width.

References: WAC 222-30-022
Show the following on the Activity Map:
- Stream segment identifiers (Do not use S, F, or N)
- Channel Migration Zone (CMZ)
- Location of trees that are left to make up basal area deficiency due to the presence of a stream adjacent parallel road (Harvest Code H)
- New road crossings (Harvest Code I)
- Road construction or day-lighting (Harvest Code J)
- Yarding corridors where trees will be removed from the Inner Zone (Harvest Code K)

References: WAC 222-30-060, WAC 222-30-022

26. If harvesting within 50 feet of any Type Np water, complete the table below. Show RMZs, along with their associated Stream Segment Identifiers, on the Activity Map.

Example:

<table>
<thead>
<tr>
<th>Stream Segment Identifier (letter)</th>
<th>Selected Strategy (partial cut or clearcut)</th>
<th>Stream Segment Identifier (letter)</th>
<th>Selected Strategy (partial cut or clearcut)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Clearcut</td>
<td></td>
<td></td>
</tr>
<tr>
<td>B</td>
<td>Partial Cut</td>
<td></td>
<td></td>
</tr>
<tr>
<td>C</td>
<td>Clearcut</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Stream Segment Identifier: Enter a different stream identifier (letter) for each stream segment. Do not use the letters S, F, or N.

Selected Strategy: Enter partial cut or a clearcut harvest strategy for each unit harvested. If your harvest strategy is approved by DNR, it will become a ‘Continuing Forest Land Obligation’ which means:
- You cannot change the harvest type until July 1, 2051 [WAC 222-30-022(2)(b)]. Refer to WAC 222-20-055 for more information on continuing forest land obligation.
- If you sell the land, you and the buyer must sign a ‘Notice of Continuing Forest Land Obligation Form’ and provide a copy to DNR. The DNR Region office has copies of the form.
- You can choose to partial cut if the area within the buffer meets the basal area and leave tree requirements in WAC 222-30-022(b)(i).
  - Additional leave tree requirements exist for stream adjacent parallel roads and/or side-slope seeps. Refer to WAC 222-30-022(2)(b)(i)(D) for more information on these requirements. Refer to WAC 222-16-010 for definitions of stream adjacent parallel road and side slope seep (found under the definition for sensitive site).
  - Include a leave tree tally by diameter class with your FPA/N that shows how these requirements are met.
- You can choose to clearcut if the leave areas meet the basal area requirements in WAC 222-30-022(1)(b) AND streamside boundaries required in WAC 222-20-022(b)(ii)(C) are left.
  - There are additional requirements in WAC 223-30-022 (2)(c) for stream adjacent parallel roads.
  - Include a leave tree tally by diameter class that shows how these requirements are met.

27. How are the following currently marked on the ground? Specify colors of flagging, paint, tags, or describe other features used for boundary markings. If you describe them in Question 28 or in an attachment for boundary marking descriptions, write ‘see Question 28 or ‘attached’. Boundaries need to be marked on the ground prior to submitting your FPA/N. If field markings are absent during field review, your FPA/N may be disapproved because it is incomplete.

Example:

Harvest Boundaries: **N. boundary is County road. E. boundary is pasture, and all others are orange paint and flags.** Describe how your boundaries are designated. Recognizable features such as roads, fence lines, stand age class differences, etc., may be used as boundaries. See below for boundary marking requirements specific to landscape features.

Clumped Wildlife Reserve Trees/Green Recruitment Trees: **Clumped leave trees are in RMZs / WMZs.** If your wildlife reserve and green recruitment trees (WRTs/GRTs) are clumped, enter a description here. You don’t need to mark clumped WRTs/GRTs that are within RMZs, WMZs, etc. Refer to WAC 222-30-020 for more information.

Right-of-way limits/road centerlines: **Centerlines marked with blue paint and flags. R/W marked with pink paint.** Road centerlines must be marked. Right-of-way limits only need to be marked when they are outside of timber harvest unit boundaries.
Stream Crossing Work: Crossing a, b, c marked with orange flagging and paint.

Riparian Management Zone Boundaries and Leave/Take Trees: Orange paint and flagging.

Specify the colors of paint or flagging used to mark riparian management zones and individual leave trees. If you are proposing an Alternate Plan you only need to mark samples that represent your harvest strategies and the land on which they are occurring. Refer to WAC 222-30-021.

Channel Migration Zone: Pink flagging.

Specify the colors of paint or flagging used to mark the edge of channel migration zones.

Wetland Management Zone Boundaries and Leave/Take Trees: Orange paint and flags.

Specify the colors of paint or flagging used to mark wetland management zones.

28. Additional Information (attach additional pages if necessary): For hydraulic projects in or over Type S, F, or complex N Water(s) see instructions for required plan information. If applicable, include recommended mitigation measures from a geotechnical memo, letter, or report.

You may include additional information in the space provided or on a separate page. Include the FPA/N question number that each comment refers to. You may also include multiple maps to help explain your proposal.

Hydraulic plans and checklists for complete hydraulic projects in or over Type S, F, or complex N Water(s) can be found on the DNR Forest Practices website here: https://www.dnr.wa.gov/programs-and-services/forest-practices/review-applications-tpars/forest-practices-forms-and.

29. Signature Blocks. The legal LANDOWNER, TIMBER OWNER, and OPERATOR (as shown in Question 1) must EACH legibly print and sign their names and record the date of signature before this application can be accepted. If all three are the same, only the LANDOWNER box needs to be signed and dated. Signatures must be original. Stamped and/or electronic signatures will not be accepted.

The landowner understands that by signing and submitting this FPA, he/she is authorizing the Department of Natural Resources to enter the property in order to review the proposal, inspect harvest operations, and monitor compliance for up to three years after its expiration date. RCW 76.09.150

Note: A perpetual timber rights owner may sign as the Landowner. A perpetual timber rights owner does not own the land, but has permanent rights to all the timber on the land. They may submit a FPA/N without the forest landowner’s signature if:

- The forest practice is not a conversion;
- The perpetual timber owner’s name is in the TIMBER OWNER block in Question 1;
- The perpetual timber owner signs the FPA/N as the TIMBER OWNER;
- The perpetual timber owner gives DNR proof that the forest LANDOWNER has a copy of the FPA/N.

Reference: RCW 76.09.067
Activity Map Requirements

All FPA/N’s must have an Activity Map. Activity maps can be found on the DNR Forest Practices website. You may also create one with your own GIS. Do not show the location of Threatened or Endangered Species or Cultural Resources on this map.

What Must Be Shown on the Activity Map?

<table>
<thead>
<tr>
<th>Water</th>
<th>Harvest Activities (cont’d)</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Existing typed Waters within proposal and 130 feet of its perimeter. Include identifiers.</td>

</tbody>
</table>

Harvest Activities (cont’d)

- Unit boundaries (harvest, salvage, right-of-way, rock pits) |
- Unit numbers |
- Landings |

Small forest landowners who answer ‘Yes’ to Question 5 and their proposal is not on a single contiguous ownership consisting of one or more parcels, are required to submit a map identifying property owned. See sample below.
## What are the Map Standards?
- Use 1" : 1000' Activity Map found on the DNR Forest Practices website OR use larger scale maps or GIS maps to show details of harvest and road activities. The DNR Region office may ask for vicinity maps to go with large scale maps.
- Use black ink
- Do not use white out
- Include a legend
- Do not write in the margins
- Use more than one map if you need to
- Do not fax these maps to DNR

## What Additional Items Must GIS Maps Show?
- Current DNR water and wetland layers
- DNR Geographic registration TIC marks using NAD83 (at least 4 TIC marks per map)
- Contour lines with elevations (maximum 40' interval)
- Section, township and range lines and numbers & corners
- Scale bar - scale within the range of 1" = 200' to 1" = 1,000'
- North arrow
- ¼" margin on all sides
- Sizes: Letter, Legal, or Tabloid
Web References

At the DNR Forest Practices Homepage, you will find links to a variety of forest practices related topics. Call one of the Region offices if you need help with the DNR Forest Practices website. Frequently viewed topics and their web addresses are listed below. The ‘Search’ function that shows on each page of the DNR website is a helpful way to find Forest Practices and other information provided on DNR's website.

Water Typing Requirements
Eastern Washington

You are required to verify water types within 130 feet of your proposed forest practices activities prior to turning in a Forest Practices Application/Notification (FPA/N). Call the DNR Region office if you need help classifying water types. Type S (shorelines) waters don’t need to be verified and can’t be changed as these are determined by the Washington State Department of Ecology. Type F waters get the highest protection; you are not required to verify Type F waters but they must be designated on the map.

Water typing affects your FPA/N because specific water types have specific riparian management zone (RMZ) requirements. Applying a larger buffer than what is required will not affect your FPA/N in any way, however, applying a smaller buffer may result in your FPA/N being disapproved. For example, if you typed a stream as an Np stream and left an Np buffer, and DNR determines said stream to be an F stream, your FPA will be disapproved.

Note: If you base your RMZs on a proposed water type change, and DNR cannot process this change before the decision date, DNR may disapprove your FPA/N.

Step 1: Get a DNR Forest Practices Activity Map here: https://fpamt.dnr.wa.gov/default.aspx. They are also available at DNR Region offices.

Step 2: Type all waters within the area of your forest practices proposal and within 130 feet of the boundary of your proposal.
- Refer to WAC 222-16-031 and the Forest Practices Board Manual Section 13- Guidelines Determining Fish Use for the Purpose of Typing Waters for water typing information.
- Refer to the Water Type Classification Worksheet within this document for help.
- Refer to WAC 222-16-035 for wetland typing information.

Step 3: Update the DNR Forest Practices Activity Map so that it accurately shows the location(s) of the following as they exist on the ground:
- Typed Waters: Type F Water, Type Np Water, Type Ns Waters, break point between Type F Water and Type Np Water, and/or break point between Type Np Water and Type Ns Water.
- Typed Wetlands: Type A Wetland, Type B Wetland, and/or Forested Wetlands (greater than 3 acres in size)
- Add waters not shown on the Forest Practices Activity Map by:
  - Drawing the stream, lake, pond, or wetland on the map in its correct location, and
  - Labeling it with the correct water type and unique identifier that is consistent with your FPA/N.
- Edit existing waters on the Activity Map by:
  - Labeling the water with the correct water type and unique identifier that is consistent with your FPA/N.
- Delete waters that do not exist by:
  - Crossing them off the Activity Map using a series of X’s, and
  - Explaining in Question 28 of your FPA/N how you determined that the waters do not exist (i.e. you walked the area and did not find a defined channel).

Note: The updated map that you create is only for your FPA/N and does not result in an update to DNR’s Water Type Maps.

Step 4: Use one or more of the following ways to explain how you verified typed water(s) (Type F, Type Np, Type Ns), including how you determined that a water type shown on the map does not exist on the ground:
- Use a Water Type Classification Worksheet(s) to help you determine stream types and describe how streams were typed within and adjacent to the proposal area.
- Use a Water Type Modification Form (WTMF) to both explain the information above AND update the DNR Water Type Map:
  - WTMFs are not required with your FPA/N.
  - For more information, refer to the WTMF and instructions, which can be found on the DNR website or at the DNR Regional office.
Instructions for Appendix A. Water Type Classification Worksheet

The Water Type Classification Worksheet is a tool to document water type based on field verification per WAC 222-16-031. It is not required. The purpose of the worksheet is to help you determine stream types and describe how streams were typed within and adjacent to the proposal area. All waters within 200 feet (Western Washington) or 130 feet (Eastern Washington) of the proposed forest practices activity are required to be typed. This worksheet will not change the water type maps. If you want to make permanent changes to the water type maps, please use a Water Type Modification Form (WTMF).

NOTE: It is important to determine the uppermost point of perennial flow for Type Np Waters. It is strongly recommended that landowners locate this point during the driest period of the year, which is typically August through September.

Stream/Segment ID: Enter the unique identifier for the stream segment listed on your FPA/N. If you have several stream segments of the same type, you can list more than one identifier in each column (e.g. Stream/Segment ID: A, E, L).

Date Observed: List the date the stream was verified in the field.

1. Did you determine fish use as described in the Forest Practices Board Manual Section 13? Or, does the stream have waiver characteristics? [See WAC 222-16-031(3)(b)(ii)]
   [ ] No. Continue.
   Check ‘no’ if you did not determine fish use as described in Forest Practices Board Manual Section 13 or if DNR has not waived or modified the characteristics in WAC 222-16-031(3)(b)(i). Continue to 2.
   [ ] Yes. Attach documentation or list approved WTMF Number.
   Check ‘yes’ if you determined fish use following the methods described in Forest Practices Board Manual Section 13 and attach survey documentation.
   Check ‘yes’ if the stream/segment was previously surveyed and documented with a WTMF. List the WTMF Number. Continue to 2.
   [ ] Fish found. Stop.
   If fish were found do not continue the worksheet. The stream/segment must be afforded protection for Type F Water.
   [ ] No fish found. Continue to 6.
   If fish were not found continue to 6 to determine/describe whether the stream/segment is an Np or Ns.
   [ ] Yes. Meets waiver criteria.

2. Were fish observed or are fish known to use the stream any time of the year?
   Check ‘yes’ if fish were observed or are known to use the stream. Do not continue worksheet. The stream/segment must be afforded protection for Type F Water.
   Check ‘no’ if fish were not observed and are not known to use the stream. Continue to 3.

3. Is there an impoundment (ponded water) upstream of the assessed segment that is greater than 0.5 acres?
   Check ‘yes’ if there is an impoundment at seasonal low water. Do not continue the worksheet. The stream/segment must be afforded protection for Type F Water.
   Check ‘no’ if there is not an impoundment. Continue to 4.

4. Are there segments within or upstream of the assessed portion of the stream where the average bankfull width is two feet (Western Washington) or three feet (Eastern Washington) or greater? AND, is the average stream gradient less than or equal to 16%?
   This question defers to the characteristics described in WAC 222-16-031(3)(b)(i) in absence of determining fish use per Board Manual Section 13. Recording and providing observations, notes, and photos of this situation can help document decisions with regard to these segments of streams. See Figure 1.
   Check ‘yes’ if the stream/segment meets the question’s description. Do not continue the worksheet. The stream/segment must be afforded protection for Type F Water.
   Check ‘no’ if the stream/segment does not meet the question’s description and continue to 5.
5. Are there segments within or upstream of the assessed portion of the stream where the average bankfull width is two feet or greater (Western Washington) or three feet or greater (Eastern Washington)? AND, is the average stream gradient between 16% and 20%? AND, is the contributing basin to the stream greater than 50 acres (Western Washington) or 175 acres (Eastern Washington)?

See question 4. If the contributing basin size is greater than 50 acres in western Washington or 175 acres in eastern Washington the stream/segment gradient can be up to 20% and still meet Type F Water characteristics. Recording and providing observations, notes and possibly photos of this situation can help document decisions with regard to these segments of streams. See Figure 1.

- Check ‘yes’ if the stream/segment meets the question’s description. Do not continue the worksheet. The stream/segment must be afforded protection for Type F Water.
- Check ‘no’ if the stream/segment does not meet the question’s description and continue to 6.

6. Does the stream segment contain water at all times during a normal rainfall year?

- Check ‘yes’ if the stream/segment contains water year-round. The stream/segment is a Type Np Water. Skip to 9 to describe how the uppermost point of perennial (year-round) flow was determined.
- Check ‘no’ if the stream/segment is dry at some point during the year. Continue to 7.

7. Is the stream segment downstream of a perennial source of water?

- Check ‘yes’ if there is a perennial water source upstream of the stream/segment. Go to 9 to describe how the uppermost point of perennial flow was determined.
- Check ‘no’ if there is not a perennial water source upstream of the stream/segment. Continue to 8.

8. Is the stream physically connected by an above-ground channel to a Type S, F, or Np water?

- Check ‘yes’ if the stream is connected. Do not continue the worksheet. The stream/segment is a Type N Water.
- Check ‘no’ if the stream is not connected. Do not continue the worksheet. The stream/segment is a non-typed water.

9. Describe how you determined the uppermost point of perennial flow. Include a description of its location and show the point on a map (Use a separate piece of paper if necessary).

Stream/Segment ID: ____________________________ Description: ____________________________________________

List the stream/segment identifier you wish to describe. Use the Description box to describe how you determined the uppermost point of perennial flow. For example, “the uppermost point of perennial flow was identified by perennially saturated soils and wetland vegetation communities” or ‘the uppermost point of perennial flow was identified at the Np/Ns type break- the most upstream point of the channel containing perennial flow.” Refer to WAC 222-16-010 for definitions on sensitive sites and Board Manual Section 7- Guidelines for Riparian Management Zones for guidance on identifying sensitive sites. Provide any other pertinent information, attaching additional sheets as necessary.
Instructions for Appendix D. Slope Stability Informational Form

If you answered “Yes” to Question 10 on the Eastern Washington Forest Practices Activity/Notification (FPA/N) form, completion of this Slope Stability Informational Form (SSIF) is required. The SSIF is used to identify and explain potentially unstable slopes or landforms located in or around a proposed forest practices activity. Use this form to:

- Identify and explain potentially unstable slopes or landforms located in or around a proposed forest practices activity.
- The type of potentially unstable slope or landform, and
- How you identified the boundary or extent of those features.

Refer to WAC 222-16-050(1)(d) and Forest Practices Board Manual Section 16 – Guidelines for Evaluating Potentially Unstable Slopes, for definitions and descriptions of potentially unstable slopes or landforms.

1(a). What preliminary screening tools were used to identify unstable slopes or landform features in or around your (FPA/N) proposal?

Check all boxes that apply. If the “other” box is checked, provide a written explanation in the space provided.

- Landslide Inventory and Landslide Hazard Zones screening tools are available within the Forest Practices Application Mapping Tool (https://fpamt.dnr.wa.gov/default.aspx) under the Resource Mapping Theme.
- Additional information regarding geology in Washington State is found at: http://www.dnr.wa.gov/geologyportal.

1(b). Did the field review indicate any of the unstable slopes or landform features identified using methods in Question 1(a) are not present on the site?

Select NO or YES. If “yes” is selected, provide a written explanation in the space provided.

If “Landslide Inventory” or “Landslide Hazard Zones” is selected, describe in the space provided whether the feature detected with the screening tool was also observed in the field. If it was not observed in the field, use the space provided to describe what was observed in the field.

2(a). Are you proposing to conduct forest practices activities in or over potentially unstable slopes or landforms?

Select NO or YES. When making your selection, consider whether the forest practices you will be conducting will be in, on, or directly over any potentially unstable slopes or landforms. If “yes” is selected, check all boxes that apply. If “other” is selected, provide a written description in the space provided.

Additional examples of Category E features may include, but are not limited to:

- Areas that do not explicitly meet a Rule Identified Landform (RIL) criteria but due to site-specific factors or combinations of factors may be considered a potential delivery source or threat to public safety,
- Debris flows, or active, ancient, or relic deep-seated landslides

2.(b). Will timber harvest or road construction activities occur in, on, or directly over potentially unstable slopes or landforms?

Select NO or YES. If “yes” is selected, check all boxes that apply to indicate the timber harvest and road construction forest practices activities that may occur in, on, or directly over the potentially unstable slopes or landforms identified in Question 2(a) above. Examples may include, but are not limited to:

- Suspending cables over an inner gorge located within a Riparian Management Zone (RMZ) adjacent to the forest practices activity,
- Building a road across a stream associated with an inner gorge, or
- Timber harvest within an active, ancient, or relic deep-seated landslide.
If you will be harvesting timber, constructing road, locating tailholds on, cutting trees for yarding corridors, or locating yarding corridors that will not have full suspension in or on potentially unstable slopes or landforms, you may also need to complete and attach a geotechnical memo, letter, or report prepared and stamped by a Qualified Expert. If applicable, also attach a completed State Environmental Policy Act (SEPA) Environmental Checklist, Habitat Conservation Plan (HCP), or watershed analysis prescriptions.

3(a). Are you proposing to conduct forest practices activities around or adjacent to potentially unstable slopes or landforms?
Select NO or YES. If "yes" is selected, check all boxes that apply to indicate the timber harvest and road construction activities that may occur around or adjacent to the potentially unstable slopes or landforms identified in Question 2(a) above. Examples of forest practices activities may include, but are not limited to:

- Suspending cables over an inner gorge located within a Riparian Management Zone (RMZ) adjacent to the forest practices activity,
- Building a road across a stream associated with an inner gorge, or
- Timber harvest within an active, ancient, or relic deep-seated landslide.

If you will be harvesting timber, constructing road, locating tailholds on, cutting trees for yarding corridors in or on, or locating yarding corridors that will not have full suspension around or adjacent to potentially unstable slopes or landforms, you may need to complete and attach a geotechnical memo, letter, or report prepared and stamped by a Qualified Expert. If applicable, also attach a completed State Environmental Policy Act (SEPA) Environmental Checklist, Habitat Conservation Plan (HCP), or watershed analysis prescriptions.

3(b). What forest practices activities may occur around or adjacent to potentially unstable slopes or landforms?
Check all boxes that apply to indicate the timber harvest and road construction forest practices activities that may occur in, on, or directly over the potentially unstable slopes or landforms identified in 2(a) above. Examples may include, but are not limited to:

- Suspending cables over an inner gorge located within a Riparian Management Zone (RMZ) adjacent to the forest practices activity,
- Building a road across a stream associated with an inner gorge, or
- Timber harvest within an active, ancient, or relic deep-seated landslide.

If you will be harvesting timber, constructing road, locating tailholds on, cutting trees for yarding corridors in or on, or locating yarding corridors that will not have full suspension around or adjacent to potentially unstable slopes or landforms, you may need to complete and attach a geotechnical memo, letter, or report prepared and stamped by a qualified expert.. If applicable, also attach a completed State Environmental Policy Act (SEPA) Environmental Checklist, Habitat Conservation Plan (HCP), or watershed analysis prescriptions.

If an explanation is required to describe how a potentially unstable slope or landform will NOT be affected by the proposed forest practices activities, additional information in the format of a geotechnical memo, letter, or report, Habitat Conservation Plan (HCP), or watershed analysis prescriptions may be required.

4(a). Were any of the features identified in Question 3(a) excluded from forest practices activities?
Select NO or YES then move to the next question as indicated.

4(b). Describe the field indicators used to exclude potentially unstable slopes or landforms from your proposed forest practices activities and identify them on the activity map required for Question 7.
Describe how the edge or extent of the potentially unstable slope or feature was determined, and explain the reasoning for the location of your forest practices activity boundary. Limit your description to only those features excluded from your forest practices activity area.

Examples:
- Orange ribbon line one crown-width away from inner gorge slope break
Inner gorge is associated with a Type F stream and the feature is fully contained within the 90 foot no-harvest RMZ.

- The harvest boundary flagging was located along the edge of the 90 foot no-harvest RMZ
- The extent of the bedrock hollow was identified where the slope break decreased from 75% to 50% and the harvest boundary was flagged one crown-length back from this break in slope

5. Are there public use areas located in or around the area of your proposed forest practices activities?

Select NO or YES. If “yes” is selected, check all boxes that apply and show the exclusion locations on the SSIF map produced for Question 7. Show public roads, utilities, residences, businesses, or designated recreation areas adjacent to, downslope, or downstream of your proposal area, on in the SSIF map produced for Question 7.

If “other” is selected, describe the public use(s) in the space provided and show their locations on the SSIF map produced for Question 7.

6. Complete the table below with date(s) and information about field review participant(s).

Complete the table to record the date(s) each field review occurred and the designated information about the participant(s). If multiple field reviews occurred to evaluate potentially unstable features, be sure to include every date. The landowner, consultant, landowner representative, or their Qualified Expert must conduct the field review, NOT a DNR Forest Practices Forester or DNR Forest Practices Geologist.

7. Create and attach a separate Appendix D – Slope Stability Information Map

The field practitioner is responsible for producing an SSIF Map as an attachment to the Forest Practices Application form. The map may be in the format of a forest practices activity map, harvest map, or GIS map – See attached example. The SSIF map may be a copy of the Forest Practices Activity Map, so long as all the information is clear and the map is legible. Be sure to include a legend and north arrow on the map. The intent of this map is to convey, at a minimum:

- The extent of areas reviewed in the field for identification of potentially unstable slopes and landforms,
- The boundaries of potentially unstable slopes or landforms as confirmed or dismissed upon field verification,
- Forest practices activity exclusion boundaries associated with field verified potentially unstable slopes and landforms, and
- Forest practices activity exclusion boundaries associated with public uses.
Instructions for Appendix I. Watershed Analysis Worksheet

Submit this form along with your Forest Practice Application/Notification (FPA/N) if:

- You are harvesting timber (including salvage) or constructing roads within or adjacent to an approved Watershed Analysis area,
- OR
- You answered ‘Yes’ to Question 6 of the FPA/N because you are substituting Watershed Analysis Prescriptions.

Use a separate worksheet for each Watershed Analysis.

**Watershed Analysis Name**: Enter the name of the Watershed Analysis where your proposal is located.

**Check all of the following that apply**: Check all of the boxes that apply regarding your review of Watershed Analysis Prescriptions.

**Resources Sensitivity Name/No**: Indicate each Resource Sensitivity Name (prescription name) that may affect your proposal.

**Implementing Prescription**: Indicate if you are implementing the prescription.

**Describe harvest techniques proposed**: Describe the specific harvest techniques you will use to implement the prescription.

**Describe road techniques proposed**: Describe the specific road techniques you will use to implement the prescription.

**Describe other techniques proposed**: Describe any other techniques you will use to implement the prescription.

Many prescriptions provide a landowner with a variety of different operational options. Sufficient detail needs to be included so that we can evaluate your proposal.

If your proposal is located on an area of resource sensitivity (prescription) AND you are choosing not to follow the prescription, your FPA/N will be processed as a Class IV-Special and require a SEPA Environmental Checklist.
