WASHINGTON METALLIC MINING PROPERTIES

Prepared by the  
DIVISION OF MINES AND MINING  
Thomas B. Hill, Supervisor  
J. W. Melrose, Geologist

Olympia, Washington  
June, 1940

DIRECTORY WASHINGTON METALLIC MINING PROPERTIES

June - 1940

This directory of the metallic mining properties of Washington is the result of exhaustive research and is as complete and accurate as it has been possible to make it. Out of approximately 130,000 mineral locations on public and private lands only those are included upon which there has been some commercial development work.

The properties which are now in active development or on which development has been performed recently are indicated by a circle (o). Those that have produced at some time in the past are indicated by a single asterisk (\*). Those that are now producing or have produced recently are indicated by a double asterisk (\*\*). These indications and the names of owners and addresses are listed in accordance with the latest information obtainable. The products represented are as they have been reported.

The properties are located by county, district and legal description. Because the boundaries of some of the districts are indefinite we have arbitrarily included nearby properties. In some instances we have estimated the legal description from the geographical description. In these instances the locations are approximately correct.

Coal, oil, gas, placer and non-metallic properties are not included. A directory of these will be compiled separately.

All additional available information, including sources from which obtained, are on file in the Division of Mines and Mining.

Metallic values are indicated as follows:

C - copper	An - antimony	Mn - manganese
G - gold	Ar - arsenic	Mo - molybdenum
L - lead	Co - cobalt	Ni - nickel
S - silver	Cr - chromium	Pl - platinum
Z - zinc	Me - mercury	Va - vanadium
	Mg - magnesium
