

State of Washington
Department of Natural Resources
Fire Season 2006

Calendar year 2006 was a successful one for the Department of Natural Resources' (DNR) fire protection program. DNR met its main objectives: providing for the safety of its firefighters, the public, and detecting and controlling most wildfires when small. We take this opportunity to thank all of our federal, state and local agency partners; private contractors; support personnel and, especially, our DNR dispatchers, fireline overhead, firefighters, and support personnel.

Calendar year 2006 was the worst fire season since 1994, over 410,000 acres burned in Washington State. April and May brought drought-like conditions in the forest fuels; however, rain in early June slowed the start of fire season. At the height of the fire season, more than 4,000 firefighters were responding to fires in the state of Washington.

In 2006, DNR's goal was to control 93 percent of the wildland fires that affect lands protected by the agency at less than ten acres in size. By doing this, fires are less dangerous; consume fewer natural resources, and pose less threat to residences and other human developments. DNR was successful. There were no serious firefighter injuries or fatalities, and DNR controlled 96 percent of the fires before they grew larger than ten acres in size. Thirty - six wildfires grew larger than ten acres. Among these, ten grew larger than 100 acres, requiring elite incident management teams and commitment of large quantities of fire suppression resources.

Compared to the five-year average (2002-2006), 2006 was 20 percent above average in terms of the number of wildland fire on or threatening lands protected by the agency, and 130 percent above average in terms of the number of acres burned. DNR responded to 1,864 reports of fire, of which there were 1,021 fires¹ that burned 48,802 acres.

¹ Fires as used in this report means the same as DNR's term "classified" fire: an uncontrolled fire that required suppression action by the department or its cooperators to prevent the fire from spreading to or burning on lands for which the Department of Natural Resources (DNR) has fire protection responsibility.

Following a typical pattern, both the numbers of fires and acreage burned were markedly higher in the areas east of the crest of the Cascades Mountains as compared to areas to the west of the Cascades: there were 568 fires that burned 47,890 acres on the east side, and 453 fires that burned 911 acres on the west side.

DNR provided firefighting assistance to federal, state and local fire agencies under numerous cooperative agreements. Outside of Washington State, DNR personnel responded to fire calls in Oregon, Arizona, Montana, Oklahoma, Texas, New Mexico and Nevada. As well, DNR personnel responded to Southwest Washington's Flood Recovery for emergency response in the state.

Points of Interest:

- Among DNR's six upland operational Regions, Northeast Region had the highest number of fires (403), followed by Pacific Cascade Region (251), and Southeast Region (165).
- The first large wildfire was the "Tri Pod" fire that began on July 4 in Okanogan County. This lightning caused and wind driven fire spread to more than 175,000 acres on state (11,500) and federal protection. The Tri Pod fire was finally controlled on November 9.
- The largest fire involving DNR-protected lands was the "Columbia Complex" (caused by lightning on August 21) which burned a total of 109,000 acres on local, state (44,350 acres) and federal protection in Walla Walla and Columbia Counties.
- By September 2, there were ten large wildfires burning uncontrolled on both sides of the Cascade Mountains. All available Washington State (state, federal, and local government) firefighters trained in wildland fire response were committed to fighting wildland fires.
- Out-of -state resources were called in to assist from fourteen other states including Alaska, Florida, Louisiana, North Carolina, Wisconsin and Arizona.
- Fire specialists from Australia and New Zealand and crews from British Columbia and Alberta, Canada also joined DNR's firefighting efforts.
- Due to a shortage of available air resources, DNR contracted with the State of California for the use of a DC-10 air retardant aircraft and received the assistance of the Washington State National Guard for the use of three helicopters and helicopter support personnel.
- 2006 was the costliest year in recorded history for wildland fire fighting expenses: \$187 million statewide (federal and state), \$64 million DNR expenditure – DNR's approach continues to be based on strong interagency cooperation at the local, state, federal and international levels and effective use of resources from the private sector.

¹ A "Classified" fire: an uncontrolled fire requiring suppression action by the department or its cooperators to prevent the fire from spreading to or burning on lands for which the Department of Natural Resources (DNR) has wildfire protection responsibility

* A False Alarm is a reported fire on which initial attack dispatch action was initiated but no fire could be found, or a fire burning that is controlled.

** Other Agency is a fire burning on another agencies jurisdiction and does not pose an imminent threat to Department of Natural Resources protected lands and DNR supplies suppression resources through agreements or closest forces concept.

*** Unclassified fires are fires that have gone out naturally or under prevailing weather or fuel conditions do not threaten Department of Natural Resources protected lands.
