

Firewise landscaping and construction only works if it's properly maintained. There are some simple maintenance items that you can do around your home to increase its survivability.

On a regular basis you should consider the following:

- Keep gutters, eaves and roofs clear of leaves and other debris.
- Make periodic inspections of your home by looking for deterioration such as breaks and spaces between roof tiles, warping siding, or cracks in the structure.
- Store firewood or other combustible items away from the house.
- Trim back vegetation and overhanging limbs along your driveway to ensure easy access for fire engines.
