

Choices made in the design and construction of a new home or remodel project can greatly reduce the risk of losing your home to a wildland fire.

Consider incorporating some of these construction choices when building or remodeling your home:

- Use construction materials that are fire-resistant or non-combustible whenever possible.
- Consider using Class A Shingles, tile, metal or concrete materials for roofing.
- Use double pane glass in windows and consider adding non-flammable shutters.
- Include a driveway that is wide enough to provide easy access for fire engines.
